Advisors: Prof. Ness Shroff, Prof. Yin Sun

Graduate Research Assistant

**August 2015 – current**

- We study data freshness optimization in information update networks. An important metric of data freshness is "Age-of-information" which is defined as the time elapsed since the freshest packet was generated.
- We design low complexity scheduling policies that can achieve age-optimality or near age-optimality in general system setting including arbitrary arrival process. The optimality of these policies are proven in stochastic ordering sense.
- We investigate the age-optimality for multi-channel and multihop networks.
- We design low-power age-optimal schedulers in multi-source information update systems, which are apt for many applications such as Internet of Things (IoT) and massive Machine-Type Communication mMTC.

**The American University in Cairo (AUC), Cairo, Egypt**

*Advisors:* Prof. Ayman Y. Elezabi, Prof. Karim G. Seddik

*Research Assistant*

**August 2012 – August 2013**

- Studying a cognitive radio network in which a secondary user (SU) exploits the primary user (PU) feedback from a queuing theory point of view where the secondary user accesses the channel with different access probabilities.
- Determining the access probabilities so that the SU throughput is maximized under two PU's QoS (Quality of Service) constraints: the PU queue stability and a limit on the average PU packet delay.

**Alexandria University, Alexandria, Egypt**

*Advisors:* Prof. Karim G. Seddik, Prof. Amr A. El-Sherif, Prof. Tamer Elbatt

*Research Assistant*

**September 2011 - January 2015**

- Studying the queues stability in a random access network in which the nodes have finite energy sources. The nodes leverage the feedback information for collision resolution.
- Studying the queues stability and delay in cooperative multiple access for cognitive radio systems in which the SU has finite energy sources.
- Comparing obtained stability region and the average packet delay with those of the systems without energy constraints, and identifying the losses due to finite energy.
